

Research experience during summer vacation 2017

Research on brown rats (*Rattus norvegicus*) will continue during the summer vacation 2017. If you would be on the Island, I invite you to join the research on rats.

Research will continue on the following 3 subtopics:

1. Anesthesia, and collection of blood and tissues.
2. Bacterial culture from intestinal contents
3. Study on internal and external parasites.

In addition, we wish to expand the research on “pathology of kidney, lungs and liver”.

The tissues (kidney, liver and lungs) are already collected. Your assistance is required to process the tissues for making histopathological slides and study the lesions under microscope.

If you are interested, kindly send your CV and the area of research you are interested, to rsharma@sgu.edu by Friday 5th May 2017.

Benefits: * Stipend @ 5.00 US\$ per hour. (maximum 80 hours per month)

*Authorship on publications

*excellent research experience
